Responsibilities

Lorem ipsum dolor sit amet, consectetur adipiscing elit. Donec quis felis at nisi vulputate ultricies vitae eu magna. Integer nunc neque, vulputate non tortor id, viverra dignissim est. Sed lacus nisi, tempor quis libero vel, laoreet volutpat quam. Quisque vitae gravida ante. Pellentesque iaculis faucibus condimentum. Ut molestie laoreet nisi, quis fermentum lectus fringilla at. Maecenas aliquam velit malesuada dui vestibulum feugiat.

Issues

Implementing background p5.js sketch:

- Exporting code from web to file
- Formatting iframe to not scroll, scale to window
- Having iframe and other html elements in the same div, working with position: relative

GSAP:

- Implementing scroll when button press:
 - If the page is reloaded down the page and the user scrolls back up, the button no longer works.
- Eventually used vanilla css and html to scroll

Code Snippet

To solve GSAP scroll issue:

CSS:

```
html,body {  
  margin: 0;  
  font-family: 'Courier New', Courier, monospace;  
  ✦ background-color: var(--c-bg);  
  scroll-behavior: smooth;  
}
```

Timeline you found challenging or interesting

✦ Next steps – If you had more time and more tools, what would you do next?

HTML: `<main id="work" class="wrapper">`

```
<nav class="home_nav">  
  <ul>  
    <li><a id="work_btn_home" class="active" href="./index.html#work">Work</a></li>  
  </ul>  
</nav>
```

Code Snippet

To solve GSAP scroll issue:

CSS:

```
html,body {  
  margin: 0;  
  font-family: 'Courier New', Courier, monospace;  
  ✦ background-color: var(--c-bg);  
  scroll-behavior: smooth;  
}
```

Timeline you found challenging or interesting

✦ Next steps – If you had more time and more tools, what would you do next?

HTML: `<main id="work" class="wrapper">`

```
<nav class="home_nav">  
  <ul>  
    <li><a id="work_btn_home" class="active" href="./index.html#work">Work</a></li>  
  </ul>  
</nav>
```

Code Snippet

Using gsap text plugin for name animation

```
<!-- text plugin -->
<script src="https://cdn.jsdelivr.net/npm/gsap@3.14.1/dist/TextPlugin.min.js"></script>

<script type="text/javascript">

  gsap.registerPlugin(TextPlugin);
  document.addEventListener("DOMContentLoaded", () => {

    gsap.to("#name_logo", 1, {
      // skewX: 30, x: -500, opacity: 0,
      // duration: 1, ease: "power3.out"
      text: "Kieran Jones"
    });
  });
</script>
```

Next Steps

Project pages

- Fleshing out project pages more – replacing dummy text, images.
- Links to other project pages from a project page. – sub nav for project pages

Implementing GSAP

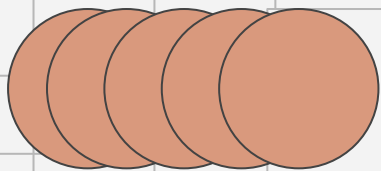

- Work section: When the user hovers on a tab, the tab extends out. Darkest red is active, cascading saturation away from active tab
- Home section: Title animates/moves/de-scambles

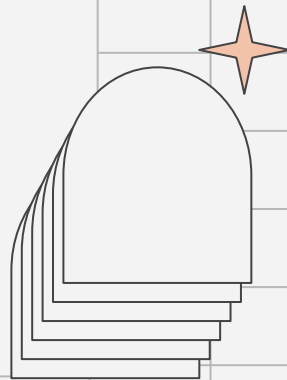

Media queries

- Making 768px size look nicer
- Switching tabs from vertical to horizontal (above file)

Thank You!
